

The Safest Choice in Benchtops Is Porcelain Stoneware

Crystalline Silica is a naturally occurring mineral found in stone products, and is considered harmless in its natural state.

However, prolonged inhalation as fine dust can cause Silicosis – a serious and incurable disease that may lead to death. While Engineered Stone and Natural Stone contain high amounts of Crystalline Silica, (up to 93% and 45% respectively) Porcelain Stoneware DOES NOT – and is considered the safest choice when fabricating benchtops and furnishings.

CSA XL Slabs

Our extensive range of high performance porcelain slabs are virtually non-porous, and are: Waterproof & Frost Resistance, Stain & Scratch Resistance, Chemical & Acid Resistance, Fire & Heat Resistant, UV & Thermal Shock Resistance – making them easy to Maintain.

Porcelain Stoneware also contains Zero VOCs, PVC, Formaldehyde, Allergens and prevents Bacterial growth – making it the safest choice for human health.

Our slabs come in various sizes and thicknesses – to suit internal and external wall claddings, kitchen and vanity tops, splashbacks, table tops and furniture coverings. Available in Marble, Stone, Concrete, Metal and Solid colours and appearances.
